nucleus

Splicing machinery

cytoplasm

- ...séquence équivalente du brin ADN sens (porteur de l'information hé
- L'ARN se présente d'abord sous forme d'un précurseur (**pré-ARN**), qui doit encore être mis en forme à l'intérieur du noyau (**épissage**, c'est-à-dire l'élimination de morceaux ne contenant pas d'information, les **introns**).
 - L'**ARNm** terminé (mature) quitte le noyau par les pores nucléaires.

2% protein coding VS 80% transcription

Mattick 2004

Nature Reviews | Genetics

- ...séquence équivalente du brin ADN sens (porteur de l'information hé
- L'ARN se présente d'abord sous forme d'un précurseur (**pré-ARN**), qui doit encore être mis en forme à l'intérieur du noyau (**épissage**, c'est-à-dire l'élimination de morceaux ne contenant pas d'information, les **introns**).
 - L'**ARNm** terminé (mature) quitte le noyau par les pores nucléaires.

nucleus

cytoplasm

nucleus

- Splicing machinery
- Stop codon
- Exon Junction Complex
- UPF1, UPF2, UPF3
- Ribosome

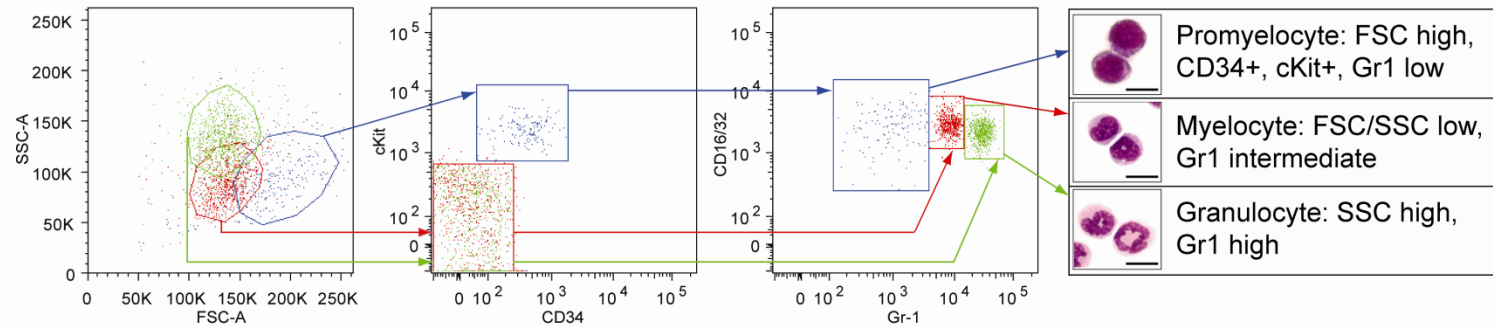

cytoplasm

Nonsense mediated decay (NMD)

Granulopoiesis = good model

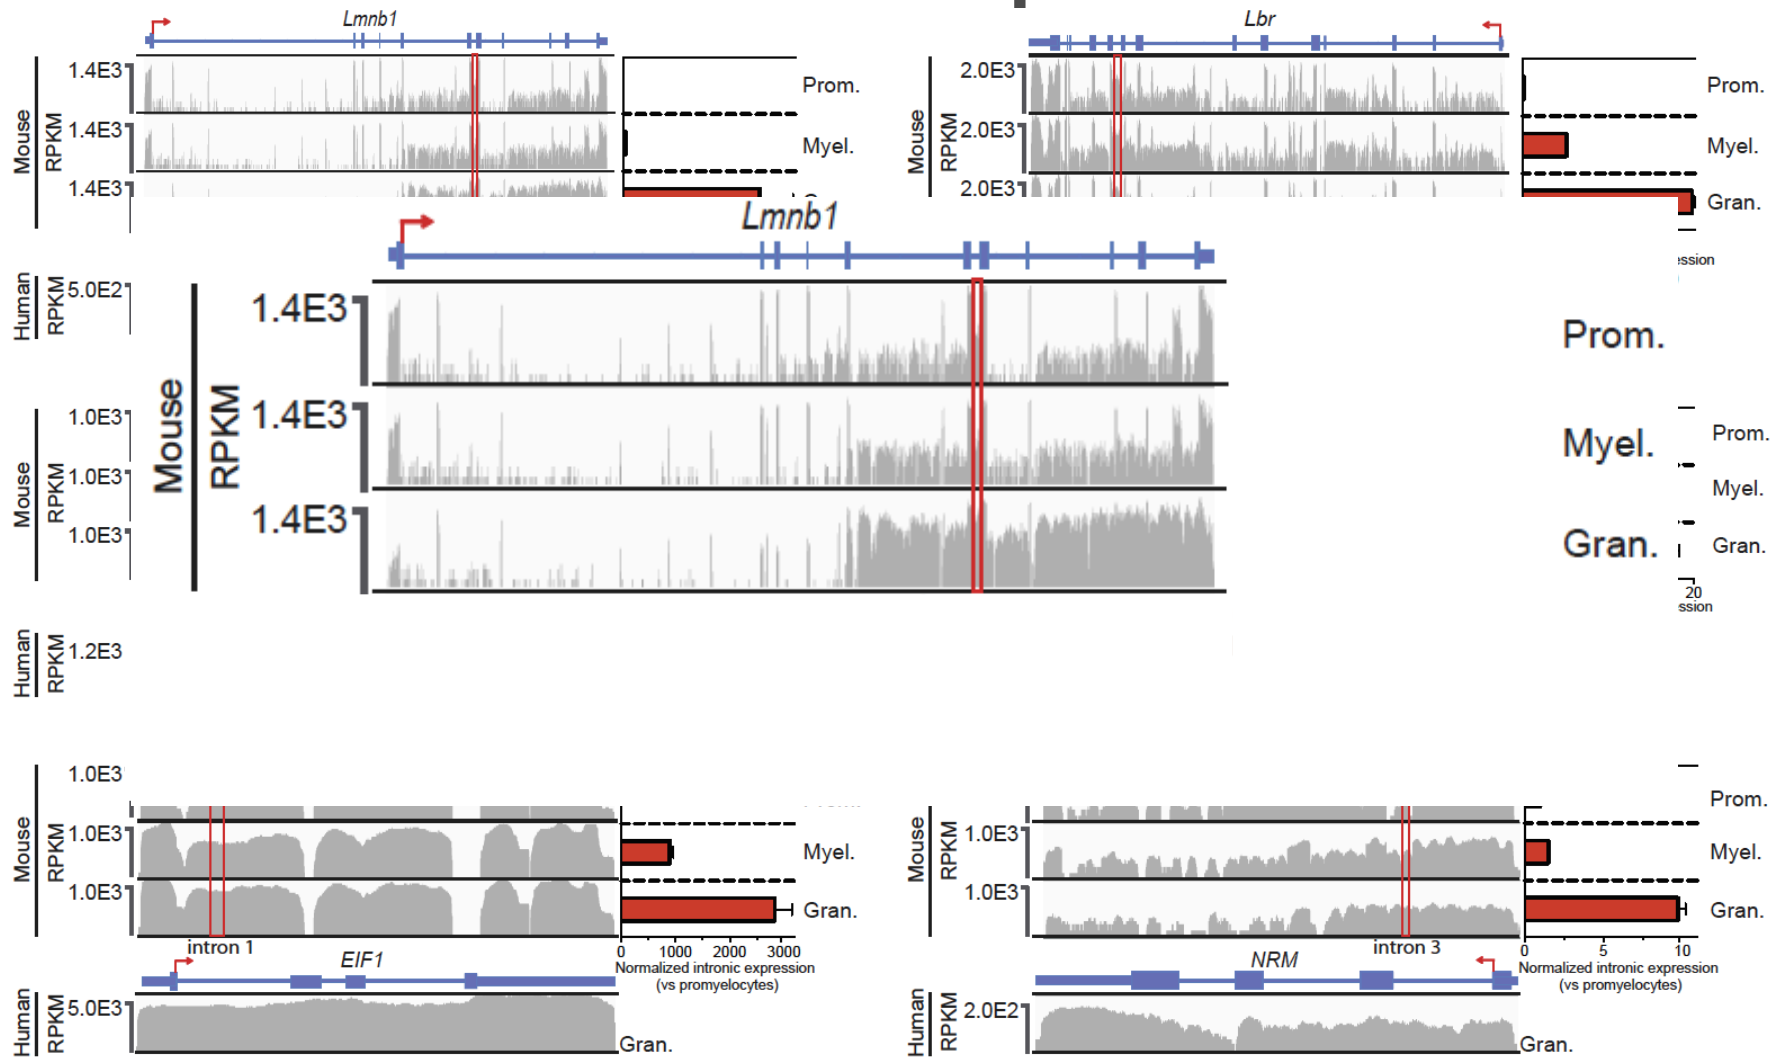

- mRNA-seq
- Mass Spectrometry

Reads in the intron?

IR transcripts

IR conserved in human & mouse ($p = 2.85 \times 10^{-22}$, hypergeometric test)

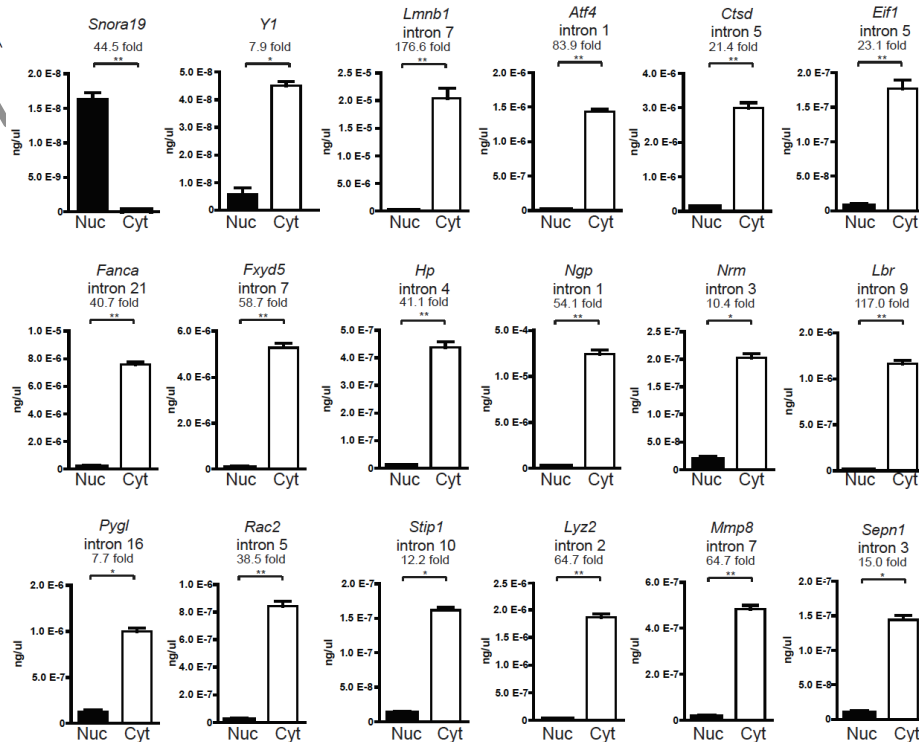

IR transcripts are not splicing intermediates

nucleus

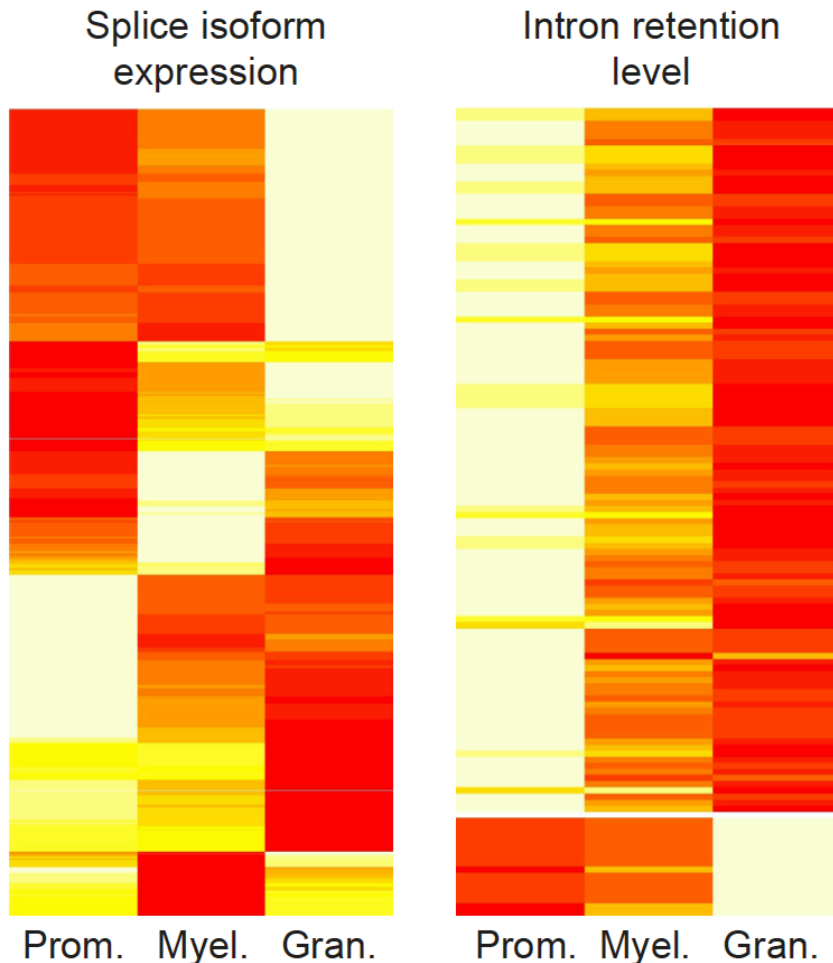

RNA Expression level

IR transcripts are degraded by NMD

IR plays a role in granulopoiesis

Alternate expression type				GO category
All	Gene exp.	Alt. splice	IR	
				Leukocyte migration
				Leukocyte activation
				Hemopoiesis
				Defense response
				Nuclear lamina
				Nuclear periphery

GO enrichment P-value

IR ↗ protein ↘

Gene/Protein Symbols	Fold expression Gran/Prom*	Highest IR

Differentiation

Promyelocytes

Myelocytes

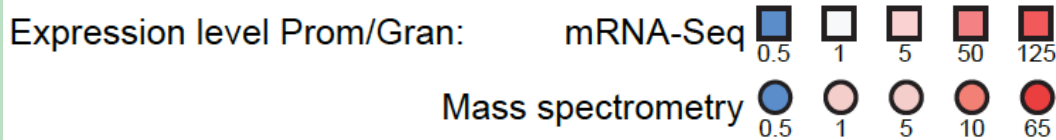

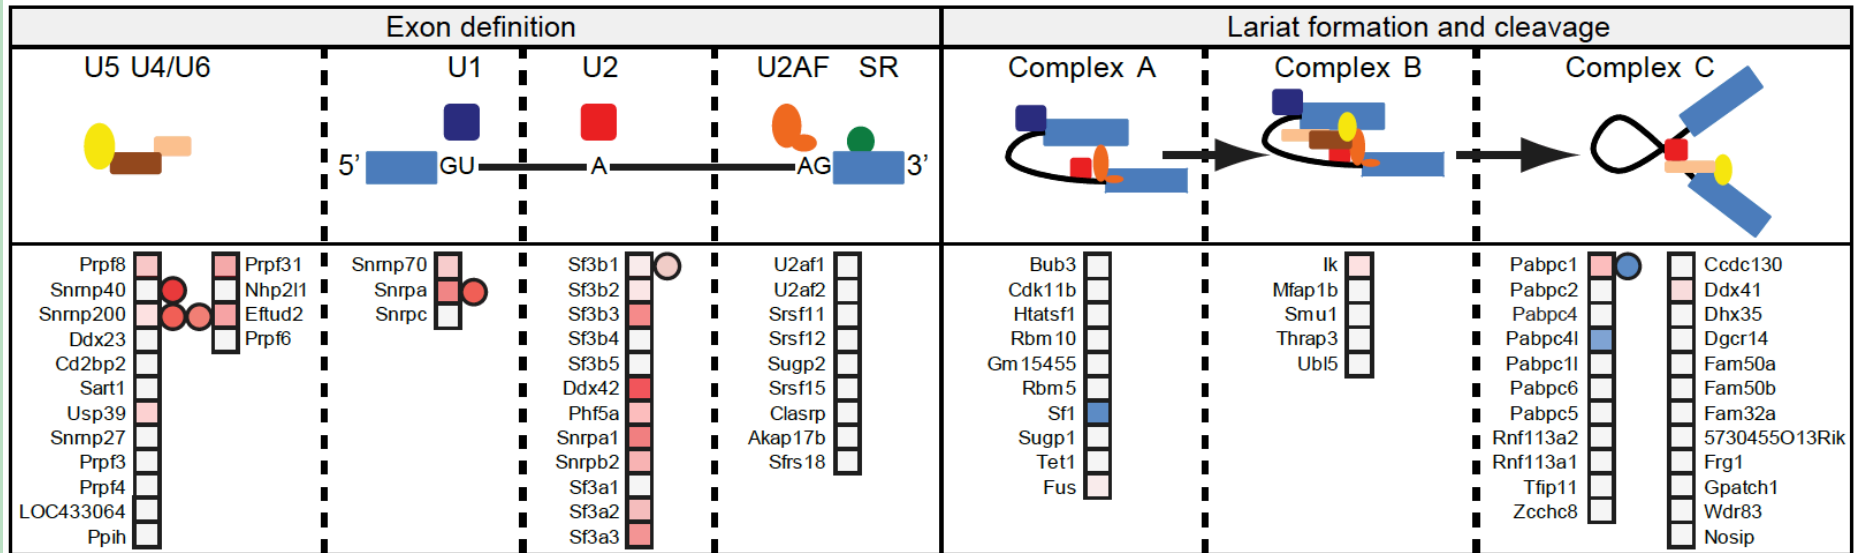

Granulocytes

- ↑ Intron retention
- ↑ Nonsense mediated decay
- ↓ mRNA & protein

IR is associated with differential expression of splicing factors

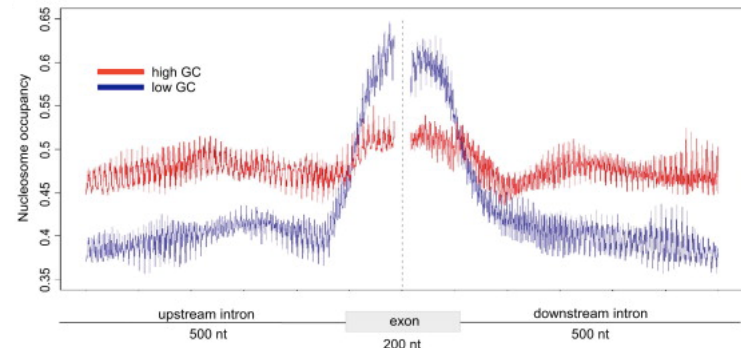

IR is associated with high intronic GC content

Nature Reviews | Genetics

Keren et al., 2010

Amit et al., Cell Reports 2012

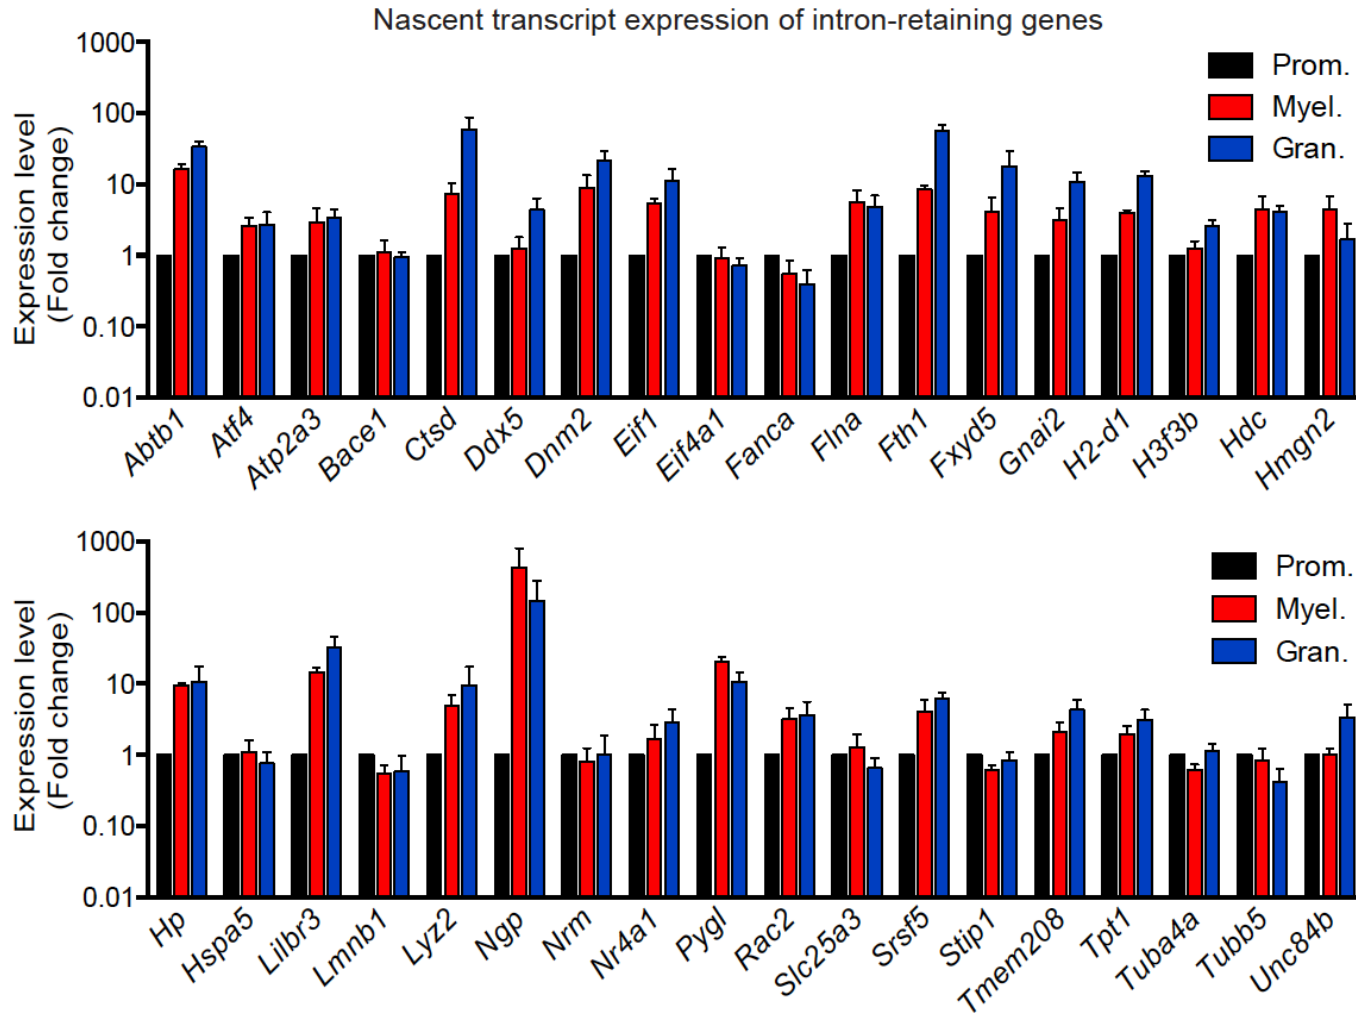

IR versus transcriptional regulation

- Does transcription play a role or cause IR?

IR & NMD regulate gene expression independently of transcriptional regulation

Cell

Orchestrated Intron Retention Regulates Normal Granulocyte Differentiation
