Padma Pillay-Esnault is a Distinguished Engineer at Huawei Technologies USA where she works on the architecture of future networks. Her current focus is Identifier-Oriented Networking and 5G for IP 2020. She is also involved in 5G and Internet architecture standard bodies such as ETSI and Internet Research Task Force (IRTF).

Padma is a veteran of the Internet network engineering community with 25 years of experience innovating, developing and building devices for large-scale networks. She is a regular and long time contributor in the Internet Engineering Task Force (IETF) and co-author of several RFCs in OSPF, MPLS/VPNs and High Availability solutions. Previously, she worked at Cisco Systems and Juniper Networks where she drove technical innovations in routing (OSPF, ISIS, Segment Routing) across all their platforms.

Padma earned her Diplôme d'Ingénieur en Informatique Appliqué aux Entreprises from Polytech Montpellier, France. She also holds a MSc Méthodes Informatiques Appliquées à la Gestion des Entreprises (MIAGE) as well as a MSc in Computer Science from University of Montpellier, France. Padma is passionate about developing disruptive technologies.
